

ATI CATALYST 4.4 Grafikkartentreiber freigegeben

09.04.2004 02:30

Der Grafikkartenhersteller "ATI (<http://www.ati.de>)" hat am vergangenen Donnerstag eine neue Version des "ATI CATALYST (<http://www.ati.com/products/catalyst/index.html>)"-Treibers veröffentlicht. Dieses Update behebt nur bisher existente Probleme und ist kein Performanceupdate. "ATI" rät daher jedem Besitzer einer ATI-Radeon Grafikkarte zu einem Grafikkartentreiberupdate.

(Um direkt zum Download zu gelangen, hier (<http://www.treiber-forum.de/news/id/1535/1#1>) klicken)

Für welche Grafikkarte ist der Treiber geeignet?

RADEON™ 9800 FamilieRADEON™ 9700 FamilieRADEON™ 9600 FamilieRADEON™ 9500 FamilieRADEON™ 9200 FamilieRADEON™ 9100 FamilieRADEON™ 9000 FamilieRADEON™ 8500 FamilieRADEON™ 7200 FamilieRADEON™ 7000 Familie

Für welche Betriebssysteme sind die Treiber geeignet?

Microsoft Windows 2000Microsoft Windows XP **Hinweis:**

Microsoft Windows 9x/ME Benutzer sollen weiterhin die "ATI Catalyst 4.3 (<http://www.treiber-forum.de/news/id/1506/1#1>)"-Grafikkartentreiber benutzen.

Changelog:

Resolved CATALYST™ Driver Issues:

Connecting a secondary CRT and enabling VPU Recover no longer results in the operating system failing to restore itself
The new rotation implementation no longer fails to update the desktop when doing a mode set on exit
Setting the display resolution to 1024x768 32bpp and switching the DVI connector for HDTV to 480i no longer results in the HDTV device not working within the ATI Control Panel
Setting the display resolution to 1152x864 32bpp under Windows XP and playing an MPEG or AVI file using the Windows Media Player no longer results in display corruption on the TV output
Setting the display resolution to 1920x1080 on an ATI RADEON 9700 PRO when connected to a specific monitor no longer results in the image not being display
The file version and the product version information is now correct

Resolved Game Issues:

Worms 3D no longer fails to properly play. Launching in game movies no longer results in only the sound being heard with the display being corrupted or black
Intermittent texture corruption and flashing is no longer seen when playing the game Battlefield 1942
The shadow of the characters in the game Splinter Cell Pandora Tomorrow are now being displayed properly
Display corruption is no longer noticed when switching between 2D and 3D modes in the game Microsoft Flight Simulator 2004
The performance of the game Tomb Raider AOD is no longer compromised when running the game at the display resolution of 1600x1200
The brightness option found in certain games is now working properly when extended desktop is enabled and both monitors are set to 1280x1024 32bpp
Configuring the game RACER version 0.50 to run at full screen, 1600x1200 32bpp, no longer results in the game failing to respond
Setting the display resolution to 1600x1200 and running the game Jedi Knight: Jedi Academy no longer results in display corruption

being noticed at a specific point in the gameDisplay corruption is no longer seen when playing the demo version of the game Far Cry
